Dr. Workman has Mary carried into a single room and restrains her hands in a leather "muff" (vi). He explains in his deposition that "lunatics who have failed in accomplishing suicide are never to be trusted, as many have been known to tear open the wound after dressing if their hands have been left unrestrained" (vi).[xlviii]

Subsequently Dr. Workman identifies, or at least supposes he identifies, the source of Mary's anxiety:

> I talked soothingly to her, hoping to calm her mind, which I found was fearfully disturbed under the conviction that she was damned, and, as she said, would go into the flames of hell. (vi)

He finds her already suffering from the way Dr. Campbell has restrained her head "by bringing her front hair on each side down to her breast, and passing it through backwards under the arm-pits, the two ends meeting behind being tied" (vi). He then gives Mary some medicine prescribed by Dr. Campbell, although he indicates now that he felt the best course in such circumstances was "to give no medicine but to watch closely until we see what is really called for" (vi). He is later informed by the attendant that Mary refused to take any medicine that prescribed by Dr. Campbell, to whom she indicated a marked aversion. For the time he ignores Mary's complaints, with the implication that he later gave them considerably more weight:

> as I am always very cautious in interpreting the expressions of the insane, I did not attach any importance to those statements. It is very common for insane persons to manifest strong dislike for those whom before their insanity they have liked best.

Nevertheless, he cautiously refuses to let Dr. Campbell see Mary the next day, because of her expressed dislike.

On the night of Thursday, April 30, Dr. Workman finds Mary "restless and much excited in mind" (vi), so prescribes opium. On Friday morning he finds that his brother, Benjamin has been with Mary most of the night, as her condition has worsened and she is having trouble breathing. He believes that "air had entered the cellular tissue beneath the skin" (vii), and sends a note to
